Krishna. S

# Satisfaction, Validity

---

- ▶ Given a FO formula  $\varphi(x_1, \dots, x_n)$  over a signature  $\tau$ , is it satisfiable/valid?
  - ▶ Satisfiable, if there exists a  $\tau$ -structure  $\mathcal{A}$  and an assignment  $\alpha$  for  $x_1, \dots, x_n$  in  $u(\mathcal{A})$  such that  $\mathcal{A} \models_{\alpha} \varphi(x_1, \dots, x_n)$

# Satisfaction, Validity

---

- ▶ Given a FO formula  $\varphi(x_1, \dots, x_n)$  over a signature  $\tau$ , is it satisfiable/valid?
  - ▶ Satisfiable, if there exists a  $\tau$ -structure  $\mathcal{A}$  and an assignment  $\alpha$  for  $x_1, \dots, x_n$  in  $u(\mathcal{A})$  such that  $\mathcal{A} \models_{\alpha} \varphi(x_1, \dots, x_n)$
  - ▶ Valid, if for any  $\tau$ -structure  $\mathcal{A}$  and any assignment  $\alpha$  for  $x_1, \dots, x_n$  in  $u(\mathcal{A})$ ,  $\mathcal{A} \models_{\alpha} \varphi(x_1, \dots, x_n)$

# Satisfaction, Validity

---

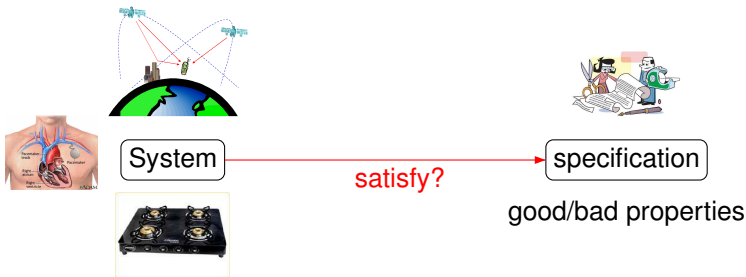

- ▶ Given a FO formula  $\varphi(x_1, \dots, x_n)$  over a signature  $\tau$ , is it satisfiable/valid?
  - ▶ Satisfiable, if there exists a  $\tau$ -structure  $\mathcal{A}$  and an assignment  $\alpha$  for  $x_1, \dots, x_n$  in  $u(\mathcal{A})$  such that  $\mathcal{A} \models_{\alpha} \varphi(x_1, \dots, x_n)$
  - ▶ Valid, if for any  $\tau$ -structure  $\mathcal{A}$  and any assignment  $\alpha$  for  $x_1, \dots, x_n$  in  $u(\mathcal{A})$ ,  $\mathcal{A} \models_{\alpha} \varphi(x_1, \dots, x_n)$
- ▶ Assume we fix the type of the structure  $\mathcal{A}$ , say words
- ▶ FO over words (why words?)

# Satisfaction, Validity

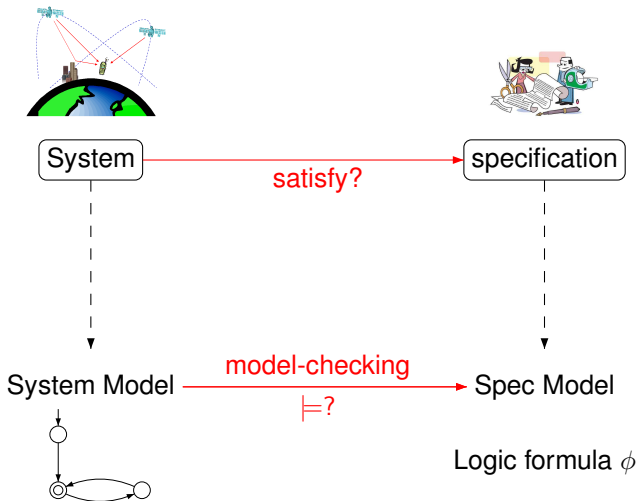

---

- ▶ Given a FO formula  $\varphi(x_1, \dots, x_n)$  over a signature  $\tau$ , is it satisfiable/valid?
  - ▶ Satisfiable, if there exists a  $\tau$ -structure  $\mathcal{A}$  and an assignment  $\alpha$  for  $x_1, \dots, x_n$  in  $u(\mathcal{A})$  such that  $\mathcal{A} \models_{\alpha} \varphi(x_1, \dots, x_n)$
  - ▶ Valid, if for any  $\tau$ -structure  $\mathcal{A}$  and any assignment  $\alpha$  for  $x_1, \dots, x_n$  in  $u(\mathcal{A})$ ,  $\mathcal{A} \models_{\alpha} \varphi(x_1, \dots, x_n)$
- ▶ Assume we fix the type of the structure  $\mathcal{A}$ , say words
- ▶ FO over words (why words?)

# Verification through Model Checking

# Verification through Model Checking

# Model Checking

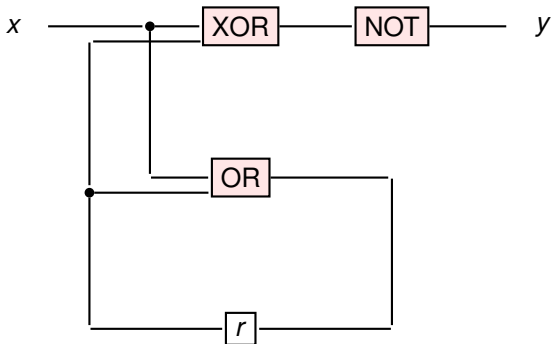

---

- ▶ Abstract the given system = code/circuit as a **finite state transition system**,  $G$
- ▶ Behaviours of the system = sequence of actions taken by  $G$  (these are words, and the actions are the symbols of the alphabet)
- ▶ Write the property of interest in a chosen logic as formula  $\varphi$
- ▶ Check  $G \models \varphi$

# Sequential Circuits

---

- ▶ Input variable  $x$ , output variable  $y$ , register  $r$
- ▶ Output  $\neg(x \oplus r)$  and register evaluates to  $x \vee r$

# Transition System for the Circuit

---

Initially, assume  $r = 0$

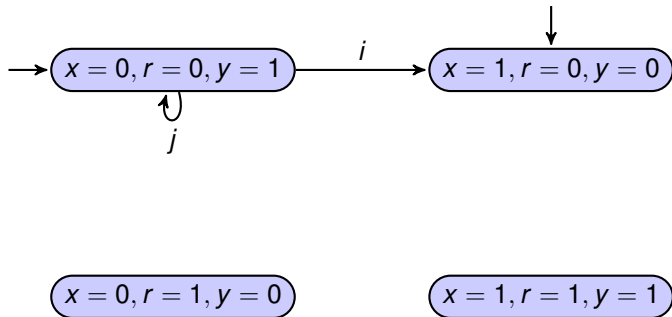

→  $x = 0, r = 0, y = 1$

↓  
 $x = 1, r = 0, y = 0$

# Transition System for the Circuit

---

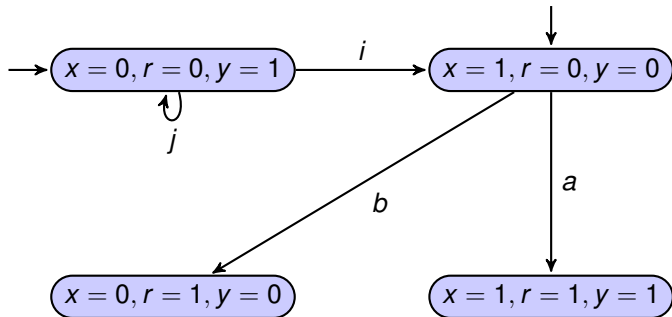

Initially, assume  $r = 0$

# Transition System for the Circuit

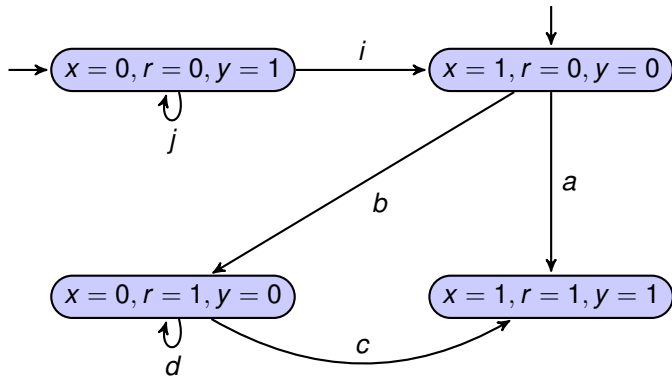

---

Initially, assume  $r = 0$

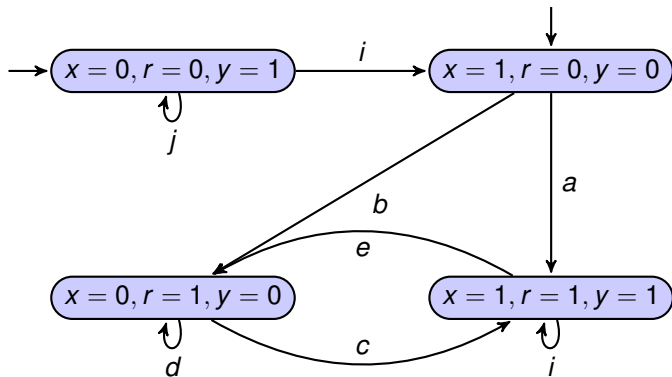

# Transition System for the Circuit

Initially, assume  $r = 0$

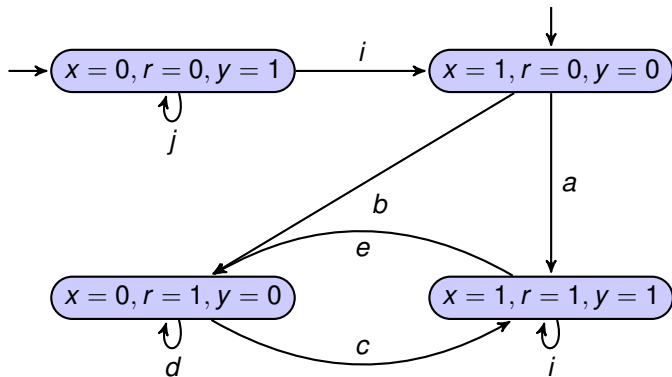

# Transition System for the Circuit

Initially, assume  $r = 0$

# Transition System for the Circuit

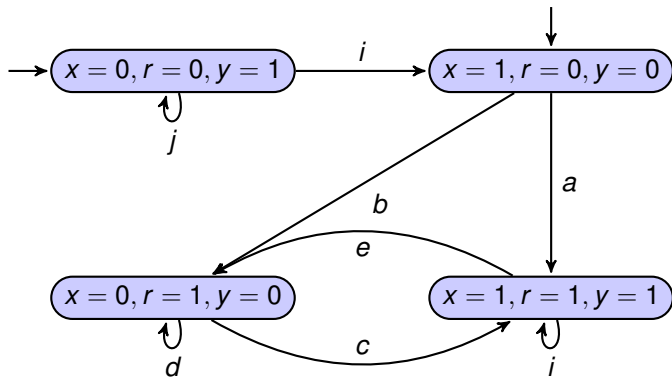

Initially, assume  $r = 0$

- Some possible behaviours :

# Transition System for the Circuit

Initially, assume  $r = 0$

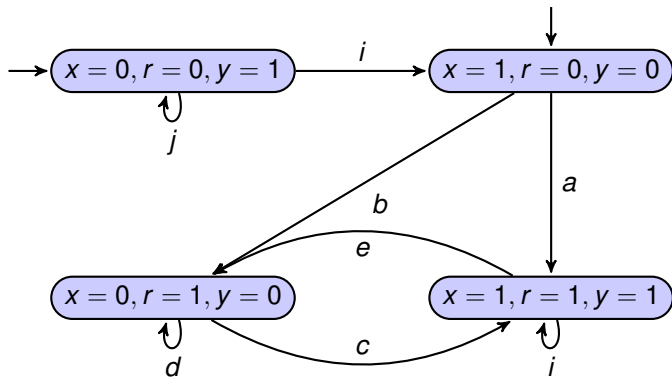

- Some possible behaviours :  $j$

# Transition System for the Circuit

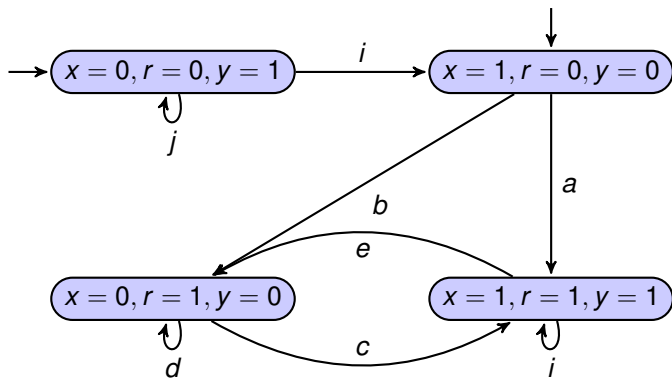

Initially, assume  $r = 0$

- Some possible behaviours :  $j\ j$

# Transition System for the Circuit

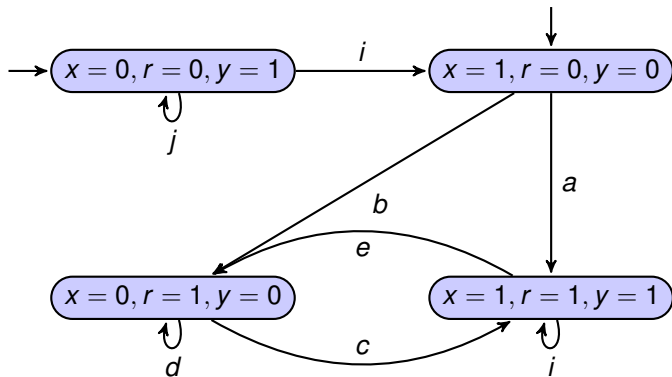

Initially, assume  $r = 0$

- Some possible behaviours :  $j j i$

# Transition System for the Circuit

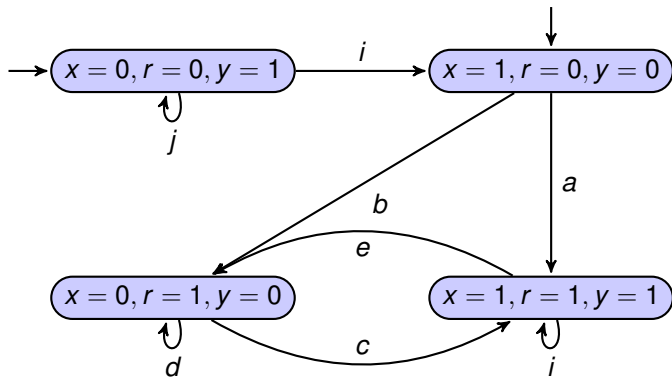

Initially, assume  $r = 0$

# Transition System for the Circuit

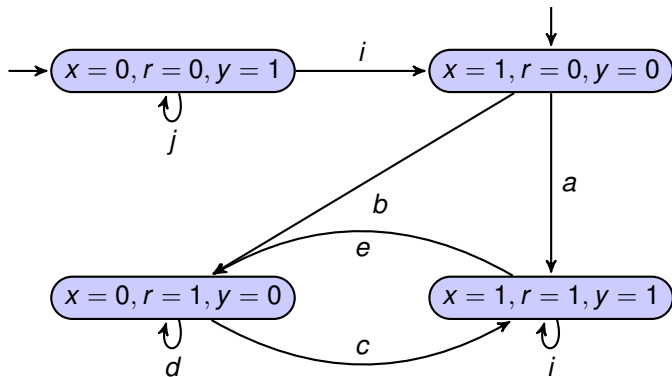

Initially, assume  $r = 0$

- Some possible behaviours :  $j j i a e$ ,

# Transition System for the Circuit

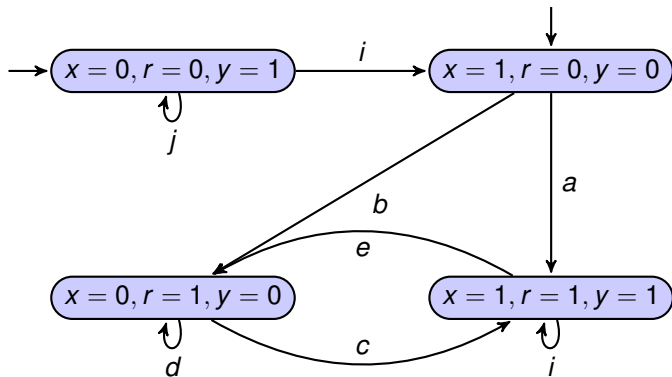

Initially, assume  $r = 0$

- Some possible behaviours :  $j j i a e, i b d d d$

# Transition System for the Circuit

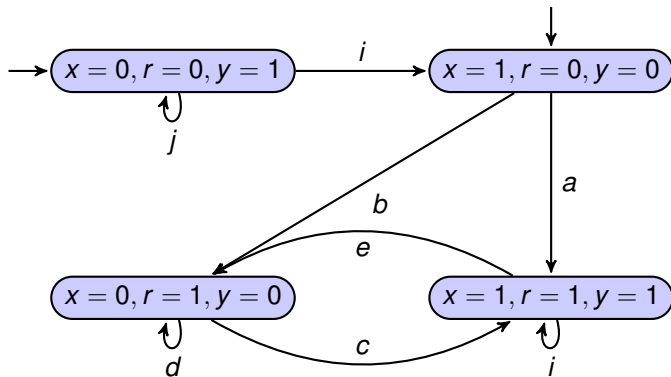

Initially, assume  $r = 0$

- ▶ Some possible behaviours :  $j j i a e, i b d d d$
- ▶ Property : No two  $i$  actions  $\neg \exists x \exists y (x \neq y \wedge Q_i(x) \wedge Q_i(y))$

# Transition System for the Circuit

Initially, assume  $r = 0$

- ▶ Some possible behaviours :  $j j i a e, i b d d d$
- ▶ Property : No two  $i$  actions  $\neg \exists x \exists y (x \neq y \wedge Q_i(x) \wedge Q_i(y))$
- ▶ Property : Every  $i$  is followed by an  $a$  or  $b$  :  
 $\forall x (Q_i(x) \Rightarrow \exists y (x < y \wedge [Q_a(y) \vee Q_b(y)]))$

# First-Order Logic over Words

# FO Over Words

---

- ▶ Given an FO sentence  $\varphi$  over words, is it satisfiable/valid?
- ▶ Satisfiable (**Valid**) iff some word (**all words**) satisfies  $\varphi$

# FO Over Words

---

- ▶ Given an FO sentence  $\varphi$  over words, is it satisfiable/valid?
- ▶ Satisfiable (Valid) iff some word (all words) satisfies  $\varphi$
- ▶ There could be infinitely many words  $w$  satisfying  $\varphi$
- ▶  $L(\varphi) = \{ \text{words } w \mid w \models \varphi \}$  is called the language of  $\varphi$

# FO Over Words

---

- ▶ Given an FO sentence  $\varphi$  over words, is it satisfiable/valid?
- ▶ Satisfiable (Valid) iff some word (all words) satisfies  $\varphi$
- ▶ There could be infinitely many words  $w$  satisfying  $\varphi$
- ▶  $L(\varphi) = \{ \text{words } w \mid w \models \varphi \}$  is called the language of  $\varphi$
- ▶ Given  $\varphi$ , write an algorithm to check  $L(\varphi) = \emptyset$ ?

# Expressiveness and Satisfiability

---

- ▶ Signature for words :  $<$ ,  $S$  and  $Q_a$  for finitely many symbols  $a$
- ▶ Given a FO formula over words, the signature is fixed

# Expressiveness and Satisfiability

---

- ▶ Signature for words :  $<$ ,  $S$  and  $Q_a$  for finitely many symbols  $a$
- ▶ Given a FO formula over words, the signature is fixed
- ▶ Expressiveness
  - ▶ Given a set of words or a language  $L$ , can you write a FO formula  $\varphi$  such that  $L(\varphi) = L$

# Expressiveness and Satisfiability

---

- ▶ Signature for words :  $<$ ,  $S$  and  $Q_a$  for finitely many symbols  $a$
- ▶ Given a FO formula over words, the signature is fixed
- ▶ Expressiveness
  - ▶ Given a set of words or a language  $L$ , can you write a FO formula  $\varphi$  such that  $L(\varphi) = L$
  - ▶ If you can, FO is expressive enough to capture your language/specification/property

# Expressiveness and Satisfiability

---

- ▶ Signature for words :  $<$ ,  $S$  and  $Q_a$  for finitely many symbols  $a$
- ▶ Given a FO formula over words, the signature is fixed
- ▶ Expressiveness
  - ▶ Given a set of words or a language  $L$ , can you write a FO formula  $\varphi$  such that  $L(\varphi) = L$
  - ▶ If you can, FO is expressive enough to capture your language/specification/property
  - ▶ If you cannot, show that FO cannot capture your property.
- ▶ Satisfiability

# Expressiveness and Satisfiability

---

- ▶ Signature for words :  $<$ ,  $S$  and  $Q_a$  for finitely many symbols  $a$
- ▶ Given a FO formula over words, the signature is fixed
- ▶ Expressiveness
  - ▶ Given a set of words or a language  $L$ , can you write a FO formula  $\varphi$  such that  $L(\varphi) = L$
  - ▶ If you can, FO is expressive enough to capture your language/specification/property
  - ▶ If you cannot, show that FO cannot capture your property.
- ▶ Satisfiability
  - ▶ Given a FO formula  $\varphi$  over words, is  $L(\varphi)$  non-empty?

# A Primer for Words

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set
  - ▶  $\Sigma = \{a, b, \dots, z\}$
  - ▶  $\Sigma = \{+, \alpha, 100, B\}$

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set
  - ▶  $\Sigma = \{a, b, \dots, z\}$
  - ▶  $\Sigma = \{+, \alpha, 100, B\}$
- ▶ Elements of  $\Sigma$  called letters or symbols

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set
  - ▶  $\Sigma = \{a, b, \dots, z\}$
  - ▶  $\Sigma = \{+, \alpha, 100, B\}$
- ▶ Elements of  $\Sigma$  called letters or symbols
- ▶ A word or string over  $\Sigma$  is a finite sequence of symbols from  $\Sigma$

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set
  - ▶  $\Sigma = \{a, b, \dots, z\}$
  - ▶  $\Sigma = \{+, \alpha, 100, B\}$
- ▶ Elements of  $\Sigma$  called letters or symbols
- ▶ A word or string over  $\Sigma$  is a finite sequence of symbols from  $\Sigma$
- ▶ If  $\Sigma = \{a, b\}$ , then *abababa* is a word of length 7

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set
  - ▶  $\Sigma = \{a, b, \dots, z\}$
  - ▶  $\Sigma = \{+, \alpha, 100, B\}$
- ▶ Elements of  $\Sigma$  called letters or symbols
- ▶ A word or string over  $\Sigma$  is a finite sequence of symbols from  $\Sigma$
- ▶ If  $\Sigma = \{a, b\}$ , then *abababa* is a word of length 7
- ▶ The length of a word  $w$  is denoted  $|w|$

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set
  - ▶  $\Sigma = \{a, b, \dots, z\}$
  - ▶  $\Sigma = \{+, \alpha, 100, B\}$
- ▶ Elements of  $\Sigma$  called letters or symbols
- ▶ A word or string over  $\Sigma$  is a finite sequence of symbols from  $\Sigma$
- ▶ If  $\Sigma = \{a, b\}$ , then *abababa* is a word of length 7
- ▶ The length of a word  $w$  is denoted  $|w|$
- ▶ There is a unique word of length 0 denoted  $\epsilon$ , called the empty word

# Alphabet

---

- ▶ An alphabet  $\Sigma$  is a finite set
  - ▶  $\Sigma = \{a, b, \dots, z\}$
  - ▶  $\Sigma = \{+, \alpha, 100, B\}$
- ▶ Elements of  $\Sigma$  called letters or symbols
- ▶ A word or string over  $\Sigma$  is a finite sequence of symbols from  $\Sigma$
- ▶ If  $\Sigma = \{a, b\}$ , then  $abababa$  is a word of length 7
- ▶ The length of a word  $w$  is denoted  $|w|$
- ▶ There is a unique word of length 0 denoted  $\epsilon$ , called the empty word
- ▶  $|\epsilon| = 0$

# Notations for Words

---

- ▶ *aaaaa* denoted  $a^5$

# Notations for Words

---

- ▶  $aaaaa$  denoted  $a^5$
- ▶  $a^0 = \epsilon$

# Notations for Words

---

- ▶  $aaaaa$  denoted  $a^5$
- ▶  $a^0 = \epsilon$
- ▶  $a^{n+1} = a^n.a = a.a^n$

# Notations for Words

---

- ▶  $aaaaa$  denoted  $a^5$
- ▶  $a^0 = \epsilon$
- ▶  $a^{n+1} = a^n \cdot a = a \cdot a^n$
- ▶ The set of all words over  $\Sigma$  is denoted  $\Sigma^*$

# Notations for Words

---

- ▶  $aaaaa$  denoted  $a^5$
- ▶  $a^0 = \epsilon$
- ▶  $a^{n+1} = a^n.a = a.a^n$
- ▶ The set of all words over  $\Sigma$  is denoted  $\Sigma^*$ 
  - ▶  $\{a, b\}^* = \{\epsilon, a, b, aa, ab, ba, bb, aaa, \dots\}$
  - ▶  $\{a\}^* = \{\epsilon, a, aa, aaa, \dots\} = \{a^n \mid n \geq 0\}$

# Notations for Words

---

- ▶  $aaaaa$  denoted  $a^5$
- ▶  $a^0 = \epsilon$
- ▶  $a^{n+1} = a^n \cdot a = a \cdot a^n$
- ▶ The set of all words over  $\Sigma$  is denoted  $\Sigma^*$ 
  - ▶  $\{a, b\}^* = \{\epsilon, a, b, aa, ab, ba, bb, aaa, \dots\}$
  - ▶  $\{a\}^* = \{\epsilon, a, aa, aaa, \dots\} = \{a^n \mid n \geq 0\}$
- ▶ By convention,  $\{\}^* = \{\epsilon\}$

# Notations for Words

---
