Vector Mechanics for Engineers: Statics

Introduction

- For a rigid body in static equilibrium, the external forces and moments are balanced and will impart no translational or rotational motion to the body.
- The necessary and sufficient condition for the static equilibrium of a body are that the resultant force and couple from all external forces form a system equivalent to zero,

$$\sum \vec{F} = 0 \quad \sum \vec{M}_O = \sum (\vec{r} \times \vec{F}) = 0$$

- Resolving each force and moment into its rectangular components leads to 6 scalar equations which also express the conditions for static equilibrium,

$$\begin{aligned} \sum F_x &= 0 & \sum F_y &= 0 & \sum F_z &= 0 \\ \sum M_x &= 0 & \sum M_y &= 0 & \sum M_z &= 0 \end{aligned}$$

Vector Mechanics for Engineers: Statics

Free-Body Diagram

First step in the static equilibrium analysis of a rigid body is identification of all forces acting on the body with a *free-body* diagram.

- Select the extent of the free-body and detach it from the ground and all other bodies.
- Indicate point of application, magnitude, and direction of external forces, including the rigid body weight.
- Indicate point of application and assumed direction of unknown applied forces. These usually consist of reactions through which the ground and other bodies oppose the possible motion of the rigid body.
- Include the dimensions necessary to compute the moments of the forces.

Vector Mechanics for Engineers: Statics

Reactions at Supports and Connections for a Two-Dimensional Structure

Rollers

Rocker

Frictionless surface

Force with known line of action

- Reactions equivalent to a force with known line of action.

Short cable

Short link

Force with known line of action

Collar on frictionless rod

Frictionless pin in slot

Force with known line of action

Vector Mechanics for Engineers: Statics

Reactions at Supports and Connections for a Two-Dimensional Structure

Frictionless pin
or hinge

Rough surface

Force of unknown
direction

Fixed support

Force and couple

- Reactions equivalent to a force of unknown direction and magnitude.
- Reactions equivalent to a force of unknown direction and magnitude and a couple of unknown magnitude

Vector Mechanics for Engineers: Statics

Equilibrium of a Rigid Body in Two Dimensions

(a)

(b)

- For all forces and moments acting on a two-dimensional structure,

$$F_z = 0 \quad M_x = M_y = 0 \quad M_z = M_O$$

- Equations of equilibrium become

$$\sum F_x = 0 \quad \sum F_y = 0 \quad \sum M_A = 0$$

where A is any point in the plane of the structure.

- The 3 equations can be solved for no more than 3 unknowns.
 - The 3 equations can not be augmented with additional equations, but they can be replaced
- $$\sum F_x = 0 \quad \sum M_A = 0 \quad \sum M_B = 0$$

Vector Mechanics for Engineers: Statics

Statically Indeterminate Reactions and Types of Constraints

(a)

(a)

(a)

(b)

(b)

(b)

- More unknowns than equations
- Fewer unknowns than equations, partially constrained
- Equal number unknowns and equations but improperly constrained

Vector Mechanics for Engineers: Statics

Sample Problem 4.1

A fixed crane has a mass of 1000 kg and is used to lift a 2400 kg crate. It is held in place by a pin at A and a rocker at B . The center of gravity of the crane is located at G .

Determine the components of the reactions at A and B .

SOLUTION:

- Create a free-body diagram for the crane.
- Determine B by solving the equation for the sum of the moments of all forces about A . Note there will be no contribution from the unknown reactions at A .
- Determine the reactions at A by solving the equations for the sum of all horizontal force components and all vertical force components.
- Check the values obtained for the reactions by verifying that the sum of the moments about B of all forces is zero.

Vector Mechanics for Engineers: Statics

Sample Problem 4.3

A loading car is at rest on an inclined track. The gross weight of the car and its load is 25 kN, and it is applied at G . The cart is held in position by the cable.

Determine the tension in the cable and the reaction at each pair of wheels.

SOLUTION:

- Create a free-body diagram for the car with the coordinate system aligned with the track.
- Determine the reactions at the wheels by solving equations for the sum of moments about points above each axle.
- Determine the cable tension by solving the equation for the sum of force components parallel to the track.
- Check the values obtained by verifying that the sum of force components perpendicular to the track are zero.

Vector Mechanics for Engineers: Statics

Sample Problem 4.3

- Determine the reactions at the wheels.

$$\begin{aligned} \sum M_A = 0: & - (10.5 \text{ kN}) 625 \text{ mm} - (22.65 \text{ kN}) 150 \text{ mm} \\ & + R_2 (1250 \text{ mm}) = 0 \end{aligned}$$

$$R_2 = +8 \text{ kN}$$

$$\begin{aligned} \sum M_B = 0: & + (10.5 \text{ kN}) 625 \text{ mm} - (22.65 \text{ kN}) 150 \text{ mm} \\ & - R_1 (1250 \text{ mm}) = 0 \end{aligned}$$

$$R_1 = 2.5 \text{ kN}$$

- Create a free-body diagram

$$\begin{aligned} W_x &= + (25 \text{ kN}) \cos 25^\circ \\ &= +22.65 \text{ kN} \end{aligned}$$

$$\begin{aligned} W_y &= - (25 \text{ kN}) \sin 25^\circ \\ &= -10.5 \text{ kN} \end{aligned}$$

- Determine the cable tension.

$$\sum F_x = 0: + 22.65 \text{ kN} - T = 0$$

$$T = +22.7 \text{ kN}$$

Vector Mechanics for Engineers: Statics

Sample Problem 4.4

SOLUTION:

- Create a free-body diagram for the telephone cable.
- Solve 3 equilibrium equations for the reaction force components and couple at A.

A 6-m telephone pole of 1600-N used to support the wires. Wires $T_1 = 600$ N and $T_2 = 375$ N.

Determine the reaction at the fixed end A.

Vector Mechanics for Engineers: Statics

Sample Problem 4.4

- Solve 3 equilibrium equations for the reaction force components and couple.

$$\sum F_x = 0: A_x + (375\text{N})\cos 20^\circ - (600\text{N})\cos 10^\circ = 0$$

$$A_x = +238.50\text{ N}$$

$$\sum F_y = 0: A_y - 1600\text{N} - (600\text{N})\sin 10^\circ - (375\text{N})\sin 20^\circ = 0$$

$$A_y = +1832.45\text{ N}$$

- Create a free-body diagram for the frame and cable.

$$\sum M_A = 0: M_A + (600\text{N})\cos 10^\circ(6\text{m}) - (375\text{N})\cos 20^\circ(6\text{m}) = 0$$

$$M_A = +1431.00\text{N}\cdot\text{m}$$

Vector Mechanics for Engineers: Statics

Equilibrium of a Two-Force Body

- Consider a plate subjected to two forces F_1 and F_2
- For static equilibrium, the sum of moments about A must be zero. The moment of F_2 must be zero. It follows that the line of action of F_2 must pass through A.
- Similarly, the line of action of F_1 must pass through B for the sum of moments about B to be zero.
- Requiring that the sum of forces in any direction be zero leads to the conclusion that F_1 and F_2 must have equal magnitude but opposite sense.

Vector Mechanics for Engineers: Statics

Equilibrium of a Three-Force Body

- Consider a rigid body subjected to forces acting at only 3 points.
- Assuming that their lines of action intersect, the moment of F_1 and F_2 about the point of intersection represented by D is zero.
- Since the rigid body is in equilibrium, the sum of the moments of F_1 , F_2 , and F_3 about any axis must be zero. It follows that the moment of F_3 about D must be zero as well and that the line of action of F_3 must pass through D .
- The lines of action of the three forces must be concurrent or parallel.

Vector Mechanics for Engineers: Statics

Sample Problem 4.6

A man raises a 10 kg joist, of length 4 m, by pulling on a rope.

Find the tension in the rope and the reaction at A.

SOLUTION:

- Create a free-body diagram of the joist. Note that the joist is a 3 force body acted upon by the rope, its weight, and the reaction at A.
- The three forces must be concurrent for static equilibrium. Therefore, the reaction ***R*** must pass through the intersection of the lines of action of the weight and rope forces. Determine the direction of the reaction force ***R***.
- Utilize a force triangle to determine the magnitude of the reaction force ***R***.

Vector Mechanics for Engineers: Statics

Sample Problem 4.6

- Create a free-body diagram of the joist.
- Determine the direction of the reaction force R .

$$AF = AB \cos 45 = (4 \text{ m}) \cos 45 = 2.828 \text{ m}$$

$$CD = AE = \frac{1}{2} AF = 1.414 \text{ m}$$

$$BD = CD \cot(45 + 20) = (1.414 \text{ m}) \tan 20 = 0.515 \text{ m}$$

$$CE = BF - BD = (2.828 - 0.515) \text{ m} = 2.313 \text{ m}$$

$$\tan \alpha = \frac{CE}{AE} = \frac{2.313}{1.414} = 1.636$$

$$= 58.6^\circ$$

Vector Mechanics for Engineers: Statics

Sample Problem 4.6

- Determine the magnitude of the reaction force R .

$$\frac{T}{\sin 31.4^\circ} = \frac{R}{\sin 110^\circ} = \frac{98.1 \text{ N}}{\sin 38.6^\circ}$$

$$T = 81.9 \text{ N}$$

$$R = 147.8 \text{ N}$$

Vector Mechanics for Engineers: Statics

Equilibrium of a Rigid Body in Three Dimensions

- Six scalar equations are required to express the conditions for the equilibrium of a rigid body in the general three dimensional case.

$$\sum F_x = 0 \quad \sum F_y = 0 \quad \sum F_z = 0$$

$$\sum M_x = 0 \quad \sum M_y = 0 \quad \sum M_z = 0$$

- These equations can be solved for no more than 6 unknowns which generally represent reactions at supports or connections.
- The scalar equations are conveniently obtained by applying the vector forms of the conditions for equilibrium,

$$\sum \vec{F} = 0 \quad \sum \vec{M}_O = \sum (\vec{r} \times \vec{F}) = 0$$

Vector Mechanics for Engineers: Statics

Reactions at Supports and Connections for a Three-Dimensional Structure

Vector Mechanics for Engineers: Statics

Reactions at Supports and Connections for a Three-Dimensional Structure

Pin and bracket

Hinge and bearing supporting axial thrust and radial load

Three force components (and two couples)

Vector Mechanics for Engineers: Statics

Sample Problem 4.8

SOLUTION:

- Create a free-body diagram for the sign.
- Apply the conditions for static equilibrium to develop equations for the unknown reactions.

A sign of uniform density weighs 1200-N and is supported by a ball-and-socket joint at A and by two cables.

Determine the tension in each cable and the reaction at A.

Vector Mechanics for Engineers: Statics

Sample Problem 4.8

- Create a free-body diagram for the sign.

Since there are only 5 unknowns, the sign is partially constrained. It is free to rotate about the x axis. It is, however, in equilibrium for the given loading.

$$\begin{aligned}
 \vec{T}_{BD} &= T_{BD} \frac{\vec{r}_D - \vec{r}_B}{|\vec{r}_D - \vec{r}_B|} \\
 &= T_{BD} \frac{-2.4\vec{i} + 1.2\vec{j} - 2.4\vec{k}}{3.6} \\
 &= T_{BD} \left(-\frac{2}{3}\vec{i} + \frac{1}{3}\vec{j} - \frac{2}{3}\vec{k} \right) \\
 \vec{T}_{EC} &= T_{EC} \frac{\vec{r}_C - \vec{r}_E}{|\vec{r}_C - \vec{r}_E|} \\
 &= T_{EC} \frac{-6\vec{i} + 3\vec{j} + 2\vec{k}}{7} \\
 &= T_{EC} \left(-\frac{6}{7}\vec{i} + \frac{3}{7}\vec{j} + \frac{2}{7}\vec{k} \right)
 \end{aligned}$$

Vector Mechanics for Engineers: Statics

Sample Problem 4.8

$$\sum \vec{F} = \vec{A} + \vec{T}_{BD} + \vec{T}_{EC} - (1200 \text{ N})\vec{j} = 0$$

$$\vec{i}: A_x - \frac{2}{3}T_{BD} - \frac{6}{7}T_{EC} = 0$$

$$\vec{j}: A_y + \frac{1}{3}T_{BD} + \frac{3}{7}T_{EC} - 1200 \text{ N} = 0$$

$$\vec{k}: A_z - \frac{2}{3}T_{BD} + \frac{2}{7}T_{EC} = 0$$

$$\sum \vec{M}_A = \vec{r}_B \times \vec{T}_{BD} + \vec{r}_E \times \vec{T}_{EC} + (1.2 \text{ m})\vec{j} \times (-1200 \text{ N})\vec{j} = 0$$

$$\vec{j}: 1.6T_{BD} - 0.514T_{EC} = 0$$

$$\vec{k}: 0.8T_{BD} + 0.771T_{EC} - 1440 \text{ N} \cdot \text{m} = 0$$

- Apply the conditions for static equilibrium to develop equations for the unknown reactions.

Solve the 5 equations for the 5 unknowns,

$$T_{BD} = 451 \text{ N} \quad T_{EC} = 1402 \text{ N}$$

$$\vec{A} = (1502 \text{ N})\vec{i} + (419 \text{ N})\vec{j} - (100.1 \text{ N})\vec{k}$$
